

CLAIMS

1. A liquid crystal device comprising:
- a pair of first and second substrates;
- a liquid crystal layer disposed between said first and second substrates;
- a plurality of transparent electrodes which are formed on a surface, on the side of said liquid crystal layer, of said second substrate such that said plurality of transparent electrodes are spaced from each other in a horizontal direction when seen in a direction perpendicular to said second substrate; and
- reflective films formed between said plurality of transparent electrodes and said second substrate, in areas opposing respective said plurality of transparent electrodes,
- wherein said reflective films are not formed in an area opposing at least some part of a space between the plurality of transparent electrodes.

2. A liquid crystal device according to Claim 1, wherein said reflective films comprise a plurality of reflective

films spaced from each other in correspondence with said plurality of transparent electrodes.

Cont'd

3. A liquid crystal device according to Claim 1, further comprising a color filter formed on at least one of said first and second substrates, said color filter including colored areas opposing to said plurality of transparent electrodes,

wherein said color filter includes no light shielding area in an area opposing at least some part of a space between said plurality of transparent electrodes.

4. A liquid crystal device according to Claim 1, wherein an insulating film is disposed between each said transparent electrode and each said reflective film.

5. A liquid crystal device comprising:

a pair of first and second substrates;

a liquid crystal layer disposed between said first and second substrates;

a plurality of transparent electrodes formed on a surface, on the side of said liquid crystal layer, of said

second substrate;

a plurality of conductive reflective films which are formed between said plurality of transparent electrodes and said second substrate in correspondence with respective said plurality of transparent electrodes, said plurality of reflective films being not electrically connected to each other; and

an insulating film disposed between each of said plurality of transparent electrodes and each of said plurality of reflective films.

6. A liquid crystal device comprising:

a pair of first and second substrates;

a liquid crystal layer disposed between said first and second substrates;

a plurality of transparent electrodes formed on a surface, on the side of said liquid crystal layer, of said second substrate;

a plurality of conductive transreflective films which are formed between said plurality of transparent electrodes and said second substrate in correspondence with respective said plurality of transparent electrodes, said plurality of

transflective films being not electrically connected to each other;

*A
Cont'd*

an insulating film disposed between each of said plurality of transparent electrodes and each of said plurality of transflective films; and

an illuminating apparatus disposed on a side of said second substrate, opposite to the side where said liquid crystal layer is disposed.

7. A liquid crystal device according to Claim 5, further comprising image signal supplying means disposed on said second substrate, for supplying an image signal to said plurality of transparent electrodes.

8. A liquid crystal device according to Claim 6, further comprising image signal supplying means disposed on said second substrate, for supplying an image signal to said plurality of transparent electrodes.

9. A liquid crystal device according to Claim 5, further comprising a plurality of switching elements disposed on said second substrate and connected to said plurality of

as claimed
transparent electrodes, respectively.

10. A liquid crystal device according to Claim 6, further comprising a plurality of switching elements disposed on said second substrate and connected to said plurality of transparent electrodes, respectively.

11. An electronic apparatus including a liquid crystal device according to Claim 1.

12. An electronic apparatus including a liquid crystal device according to *Claim 5.*

13. An electronic apparatus including a liquid crystal device according to Claim 6.
